

RAJESH KUMAR

RAJESH.ANAND421.RKM@GMAIL.COM

Profile Summary

Experienced technology leader with **12 years in Banking & Financial Services**, combining roles as **Technical Lead, AI Agent Engineer, and Junior Architect**, with expertise in designing and delivering **real-time, cross-border, and domestic payment solutions** using **Java, Spring Boot, Microservices, MQ/Kafka, AWS, Temporal, and Apache Camel**.

1 year experience as an **AI Engineer**, implementing **AI agent-based solutions within Spring Boot microservices** using **BMAD, Spec Kit, and GitHub Copilot** to enhance development efficiency, automation, and intelligent decision-making.

2 years' experience as Junior Architect along with Development

9 years' experience as **Team Lead**-cum Developer

- **Along with leadership working experience as: POD Lead, Proxy Scrum Master, and Payments SME** across ASIA region UAT implementations.
- **Adequate working expertise on different Payments Type such as:** US RTP, Direct Debit (SLDD), Request for pay (MYRFP), AU NPP, Cross border Swift payments / SWIFT GPI.
- **Have worked with Payment Regulatory Schemes such as: Pay Net MY, Lanka Pay.**
- Worked with leading industry banks: Allahabad Bank, HSBC Bank and Fiserv.
- Involved in the **Requirement Analysis, HLD creation** in accordance with the Customer requirements
- **Having good practical experience in the migration from MuleSoft to java migration using spring boot/microservices.**
- Having good working experience in **the synchronous (Rest API /SOAP API) and asynchronous (IBM MQ, Kafka, ActiveMQ, Artemis MQ) Spring Boot Microservices architecture.**
- Good working experience in Development and Enhancement roles. Experience in Unit Testing using Junit with Mockito and Power Mock Framework.
- Working experience in Version control tools like Git, GitHub, and Gitlab.
- I worked on HAP pipeline in HSBC and as part of the deployment with DevOps team.
- Worked with Performance testing tools like JMeter.
- Worked with Log monitoring tools like Splunk (searching, real time payment analysis, alert scripting, xMatters scripting etc.).

Organization:

Capgemini (Current)

Persistent Systems

TCS

Domain:

Payment Services

Insurance

Banks /Client:

Fiserv

HSBC

Diligenta

Allahabad Bank

Skills and Knowledge:

Java

Spring Boot

Rest API

Microservices

Hibernate/JPA

Apache Camel

Temporal

Thunderhead

AI Tools/Agentic

BMAD

Spec KIT

Bedrocks

GenAI Basic

Claude (Anthropic Model)

Other Skills

SQL

MySQL

HBase

NoSQL DB

MongoDB

Unix/Linux

Tools:

- Worked with sonar, Sona type, and Check Marx scans issues fixing.
- I worked with BA and Architect to build APIs as per the Business and architect design and participated in all activities from development to business Go Live.
- Ability to grasp new skills and concepts quickly and use them in a productive manner.
- Good Analytical and problems solving skills.

Work Experience

- Working as Manager -Technical lead-cum-Developer and GenAI/Agentic Engineer for Capgemini from August 2023 to till date.
- Working as Senior Engineering Lead for Persistent Systems from May 2022 to August 2023.
- Working as Assistant Consultant for Tata Consultancy Services (TCS) from March 2014 to May 2022.
-

Education

B. tech in computer Science & Engineering – VIET GB Nagar (UP)

Project Details

Project 8:

Company	: Capgemini
Project Name	: EPP & GPP Product
Role	: AI Developer-cum-Java Backend Developer
Client	: Fiserv
Duration	: October 2025 to till now

Tech Stack:

Java, Spring Boot, Rest API, Microservices, Apache Camel, Mongo DB, GitHub, Maven, Docker, Kubernetes, Active MQ, Artemis MQ, Maven, Sandbox, AWS, React, **AI Agent BMAD and Spec KIT.**

Responsibilities and Contribution:

- Implemented **RT1 clearing** inbound and outbound flows using Temporal-based microservices architecture, leveraging ISO 20022 (Prowide), Drools rule engine, Kafka messaging, and Spring Boot with PostgreSQL, while utilizing Spec Kit within GitHub Copilot to accelerate development, enhance code quality, and deliver high-performance, real-time payment processing solutions.

Eclipse IDE
IntelliJ
VSCode
Jira
Confluence
GitLab
GitHub
PyCharm
JMeter

Build Tools

Maven
Gradle

Cloud Tools:

AWS Kinesis
Lambda
DynamoDB
API Gateway

POC:

React
Playwright
Python Basic Beginner
AI/ML
Lang Chain
Lang Graph
RAG

- Led migration of the monolithic EPP Product (Q5) into a Spring Boot Microservices architecture, ensuring modularization and service boundaries aligned with domain functionality.
- Implemented data access using Spring Data repositories (JPA-style pattern) to integrate and communicate with MongoDB, ensuring consistent CRUD operations and clean repository design.
- Developed missing business logic modules and aligned them with the existing running microservices architecture, ensuring compatibility, stability, and consistent behavior across services.
- Migrated the complete monolithic EPP Product Engine into an Apache Camel-based Spring Boot Microservices Engine, transforming legacy flows into scalable integration routes.
- Worked as a Senior Apache Camel DSL Developer, building and enhancing Camel routes, processors, and service integrations for the microservices engine.
- I worked as an AI Agent Engineer to accelerate migration from legacy code to Spring Boot Microservices, supporting faster analysis, modernization planning, and development productivity.
- Worked on extraction of the code from legacy existing systems using AI agent.

Project 7:

Company	: Capgemini
Project Name	: MuleSoft to SBJ migration
Role	: POD-Lead-cum-Senior Java Backend Developer
Client	: HSBC
Duration	: August 2023 to September 2025

Tech Stack:

Java, Spring Boot, Rest API, Microservices, Oracle DB, GitHub, Maven, Docker, Kubernetes, IBM MQ, AWS, React, Splunk, Control+M, SFTP, Unix/Linux, MuleSoft, Maven.

Responsibilities & Contributions:

- Working as Specialist Engineer in HSBC Bank Technical upgrade Mule Exit project where integration layer & Orchestration layer application for RTP payments gets shifted from legacy software code base of MuleSoft to IKP SBJ code base. (Implementing Micro services & API)
- I am working as Technical Lead. My main responsibility is to discuss with HSBC management, understand the requirement, implement it into java, spring boot, microservices from mule soft.

- I am doing peer code review, junior code review, sonar issues fixing, Sona type jar dependency fixing, check Marx vulnerability fixing, managing the testing, PT testing, prod-readiness activity, technical live and Business Live, and handover the technical aspects to Product engineering team.
- Also, working as Scrum Master & POD lead as well in the project.
- Leading & Managing Team of 15 people.
- Gained strong hands-on experience migrating MuleSoft integrations to Java-based Spring Boot Microservices, ensuring functional parity and production readiness.
- Migration Scope (MuleSoft → Spring Boot Microservices):
- Mule REST flows → Spring Boot REST APIs
- Mule SOAP flows → Spring Boot SOAP Services
- Mule IBM MQ flows → Spring Boot IBM MQ integrations
- Database connectivity and data access implementation
- Data upload integration to HUB/WDA
- Centralized exception handling and standardized error responses
- Cache management for performance optimization
- Security management aligned with enterprise standards etc.

Project 6:

Company	: Persistent Systems Ltd
Project Name	: Fraud Reduction
Role	: Java Backend Developer
Client	: EWS
Duration	: Nov 2022 to August 2023

Tech Stack:

Java, Spring Boot, Rest API, Microservices, AWS Cloud (Kinesis only), HBase, Gitlab, Gradle, Docker, and Kubernetes.

Description:

Fraud Reduction is a spring Boot rest Api application for detection the frauds and provides its solution instantly. It is springBoot restApi and microservices applications to act online and real time fraud.

Responsibilities:

- Worked as backend developer for rest API and microservices.
- Developed and Delivered Spring Boot based application for transferring data from applications to HBase DB using AWS kinesis.
- Designed APIs and complex JSON Request and Response formats and standardized as per user story.

- Doing Proof of concept (POC) if new concept is required to implements in project.
- Worked on the Pen testing and verifying the code in the term of performance.
- Checking the validation and implementing global exception handling.
- Writing Junit test cases for every complete API.

Project 5:

Company	: Persistent Systems Ltd
Project Name	: Zelle Fraud Fighter
Role	: Java Backend Developer
Client	: EWS
Duration	: Aug 2022 to Nov 2022

Tech Stack:

Java, Spring Boot, Rest API, Microservices, AWS Cloud (Kinesis only), HBase, Gitlab, Maven, Docker, and Kubernetes.

Description:

Zelle Fraud Fighter is a rest API application for payment systems for Early warning which detect real time fraud and provides its logs. It is spring Boot rest API applications to prevent online and real time fraud and send its log for its evaluations the attacks.

Responsibilities:

- Developed and enhanced Spring Boot REST APIs and Microservices for real-time processing use cases.
- Integrated multiple Spring Boot REST modules/services to ensure smooth end-to-end functionality and consistent API behavior.
- Delivered sprint-based user stories by implementing REST endpoints, validations, and standardized request/response models.
- Monitored application logs to identify fraud patterns/issues, performed root-cause analysis, and fixed defects as per business requirements.

Project 4:

Company	: Persistent Systems Ltd
Project Name	: Money Maker/Biller
Role	: Java Backend Developer
Client	: EWS
Duration	: May 2022 to Aug 2022

Tech Stack:

Java, Spring Boot, Rest API, Microservices, HBase, Gitlab, Maven, Docker, and Kubernetes.

Description:

MKR/Biller is a REST API-based payment application for Early Warning Systems (EWS) that receives real-time client requests, processes payment transactions, and returns responses. The application maintains detailed logs for successful transactions and exceptions and performs real-time request validation—processing only valid transactions and rejecting invalid requests.

Key Responsibilities & Contributions:

- Built Spring Boot-based REST APIs and Microservices for backend business functions.
- Owned API design including complex JSON contracts, ensuring consistency and reusability across integrations.
- Implemented validations and global exception handling to improve stability, traceability, and user-friendly error responses.
- Delivered user stories in each sprint and supported enhancements through rapid POCs and iterative improvements.

Project 3:

Company	: Tata Consultancy Services (TCS)
Project Name	: Friends Life (FL)
Role	: Assistant consultant
Client	: Aviva Group
Duration	: April 2020 to May 2022

Tech Stack:

Java, Spring, Spring Boot, Rest API, Hibernate/JPA, Thunderhead, Oracle and Git

Description:

FL is a Spring Boot application and integrated with thunderhead tools. It is insurance-based project, and its client is Aviva group. It processes premium of the policy and calculates its sum assured, sum assured at maturity date, claim of the policy holder and it sends the reports on daily basis to client every month.

Responsibilities:

Work as a Team lead to handle all requirements in every release.

Build the code for spring boot application and make appropriate inputs as per the Web services.

Monitor Bugs from Jira, Tickets from BTS system and assigned to appropriate team members and assist them if they are facing any issues.

Inspection of the team members' code and checks its code quality.

Deploying the code and monitoring it's all processing.

Project 2:

Company	: Tata Consultancy Services (TCS)
Project Name	: Friends Provident International (FPI)
Role	: IT Analyst
Client	: Diligenta
Duration	: April 2017 to April 2020

Tech Stack:

Java, Spring, Spring Boot, Rest API, Hibernate/JPA, Jira, Thunderhead, Oracle and Git

Description:

FPI is a Spring application and integrated with thunderhead tools. It basically provides the support of the existing project. Its defects, tickets, enhancements every month to take care release, and provides its developments.

Responsibilities:

Fixing the JIRA bugs, solving the issues related to the tickets' and building the code and deploying it.

Correcting the Thunderhead Template as per jira and tickets.

Provides the report of the application related to bugs, jira's bug and completion of release work as per the weekly meeting.

Project 1:

Company	: Tata Consultancy Services (TCS)
Project Name	: ALBCBS Project
Role	: System Engineer
Client	: Allahabad Bank
Duration	: March 2014 to April 2017

Tech Stack:

Java, J2EE, Linux/Unix, Thunderhead, Oracle and Git and GitHub

Description:

Pearl Group project is a J2EE application and integrated with thunderhead tools. It is basically providing the letter for the policy holder's annual summary in PDF, fax and email and directly delivered to intended address, fax no and email Id.

Responsibilities:

Design a Thunderhead Template for processing the XML raw data.

Generate the XML as per the policy requirement.

Find Bugs from Jira, Tickets from BTS system and resolve it and deliver the template to its server.

Fix the java code if data has inconsistently appeared on output format of letter.
